belonging to him, he can be relied upon to share with the members of the lineage if this should be necessary.

Capital goods in the form of houses, granaries, and fields are the property of the lineage. Individual rights are limited to temporary use and custodianship but are passed on to others when a general shift in residence and role follows the death of a senior member of the lineage. Although property is passed on in accordance with the rules of descent in the lineage, part of the property redistributed represents the product of the labor of the lineage as a consanguineal kin group. For, as has been indicated, the labor of the wives, who are not lineage members, is as important as that of their husbands and children.

The lineage head discusses the coming year with the other elders, and an over-all production plan is made out. They decide what fields are to be left fallow, what ones are to be planted to cotton and the varieties of millet, what lands may be used by individuals desiring to plant a cash crop, and what, if any, land may be loaned to neighboring lineages or to in-laws. With the approach of the first rains, all economically active men and women go to their fields to prepare them for planting, leaving behind in the village only the old people and the children who are still too small to assist in the fields or tend their fathers' animals.

A considerable portion of the land within the limits of a Mossi village is under the direct control of the village chief (*Tenga Naba*) and the earth custodian (*Tenga Soba*), the local representatives of political and supernatural authority. This land is used for the public way, for the market place, and for burial grounds and latrines. Except for that which is too poor for any purpose, all available land within several miles of a village is put under cultivation.

Ki is the generic name which the Mossi give to the millet, which is the basic product in their economy and which receives the largest single allocation of land and labor of any Mossi economic activity. Two kinds of millet are planted, a large-grained variety (*kenda*) and a small-grained variety (*karua*). Millet is the first crop to be planted after the rains have begun. Small- and large-grained millet seeds are frequently mixed and sown in the same field. Small-grained millet may also be sown in the same field with a white bean (*benga*). A "tired" field may be left fallow for five, ten, or fifteen years. When it is first replanted, it will be seeded to millet for the first three years. The fourth year it may again be put into millet, but if the previous crop was not good, cotton will be planted. Usually, a Mossi farmer plants cotton for two years, millet for three, then groundnuts, more cotton, then two more years of millet. It is believed that cotton renews the soil because of the intensive cultivation required: the earth is brought up into hillocks and turned over; after picking, the plant may be turned under and left to enrich the soil.

during a period of transition to effective independence.

The Mossi have the unique distinction of having preserved their ethnic identity and political autonomy throughout all the vicissitudes of Sudanese history until conquered by the French on September 1, 1896. The origin of Mossi society is couched in mythological terms. According to their tradition they came from Dagomba in the Gold Coast (present day Ghana) sometime during the 11th or 12th century and moved northward towards the Niger River. During this migration they carved out three large kingdoms and many small principalities by conquering and absorbing some of the indigenous Ninisi and Foulse and Dogon populations, and by chasing the others into the cliffs of Bandiagara. In 1328, according to Es Sadi in the *Tarikh es Soudan*, the Mossi attacked, burned, and sacked Timbuktu, then held by Mali, and during the following century attacked Walata and Banku. They received their first setback by the Ali, and were severely beaten by Askia the Great, the usurper of the Songhoi throne, who lead a *jihad* against them in 1499. But their attacks into the Niger bend did not cease until the Moroccans became masters of Timbuktu sometime in the early 1590's. From that period until the French conquest, the Mossi remained relatively quiescent. They developed and maintained an economy based on grain cultivation, livestock rearing, cotton production, and trade between the forest zones and the desert. Their political system crystallized into a loose confederacy of fairly autonomous kingdoms and principalities, sometimes tribute to the Moro Naba, the ruler of Wagadougou.

Wagadougou, the most important Mossi political entity, was like the lesser kingdoms, pyramidal in political structure. At the top was and still is the Moro Naba, a lineal descendant of Wedraogo, the Dagomba conquerer who founded the Mossi group and Moro Naba Wubri, the first ruler of the Wagadougou dynasty. Paying allegiance to him, were the princes who ruled such autonomous provinces as Yako, Boulsa, Mane, Riziam, and Boussouma. These princes were all sons or near relatives of the early Moro Nabas. Directly under the Moro Naba were district chiefs who were descended from the cadet branches of the ruling family. The villages within the district were in turn ruled by the chiefs of the indigenous populations. In many of the villages,
